

## Session 2

# Text Encoding I: EpiDoc

---

Gabriel Bodard (University of London)  
Polina Yordanova (University of Helsinki)

# Session outline

1. Epigraphy, Leiden, EpiDoc (GB) (15)
2. Rules of XML (PY) (10)
3. EpiDoc Latin ostrakon demo in Oxygen (GB) (5)
4. Abbreviations (PY) (10)
5. Lacunae (GB) (10)
6. Editorial correction (PY) (10)
7. Exercise

# Session outline

1. Epigraphy, Leiden, EpiDoc
2. Rules of XML
3. EpiDoc Latin ostrakon demo in Oxygen
4. Abbreviations
5. Lacunae
6. Editorial correction
7. Exercise

Some slides in this presentation are based on work (cc) by Tom Elliott, Elli Mylonas, Charlotte Tupman, Simona Stoyanova, Irene Vagionakis, and others.

# Leiden System

## 256a. Christian funerary inscription for Helladios

[Εὐμοιριτο] Ἑλλάδιος ἔζησε ἔτι ν´  
[πλέον ἔλατ(τ)ον μῆ]ν[ες γ´] ἡμέρας  
[δεκαπέντε ὁ Χριστὸς μετὰ τ(ο)ῦ] πνεύ-  
[ματός σ(ο)υ ἐτ]ελεύ[τισεν μι]νὶ Παυνὶ  
5 [ἐβδό]μι κατὰ τοὺς Ἀφρ<ο>υς

[May he be well off]. Helladios lived approximately 50 years, three months and fifteen days. Christ be with your spirit. He died on the seventh of the month of Payn among the Africans.

## 256a. Christian funerary inscription for Helladios

[Εὐμοιριτο] Ελλάδιος ἔζησε ἔτι ν´  
[πλέον ἔλατ(τ)ον μῆ]ν[ες γ´] ἡμέρας  
[δεκαπέντε ὁ Χριστὸς μετὰ τ(ο)ῦ] πνεύ-  
[ματός σ(ο)υ ἐτ]ελεύ[τισεν μι]νὶ Παυνὶ  
5 [ἐβδό]μι κατὰ τοὺς Ἀφρ<ο>υς

[May he be well off]. Helladios lived approximately 50 years, three months and fifteen days. Christ be with your spirit. He died on the seventh of the month of Payn among the Africans.

EpiDoc

EpiDoc is an international, collaborative effort that provides guidelines and tools for encoding scholarly and educational editions of ancient documents. It uses a subset of the [Text Encoding Initiative's](#) standard for the representation of texts in digital form and was developed initially for the publication of digital editions of ancient inscriptions (e.g. [Inscriptions of Aphrodisias](#), [Vindolanda Tablets](#)). Its domain has expanded to include the publication of papyri and manuscripts (e.g. [Papyri.info](#)). It addresses not only the transcription and editorial treatment of texts themselves, but also the history and materiality of the objects on which the texts appear (i.e., manuscripts, monuments, tablets, papyri, and other text-bearing objects).

**Latest Release of all EpiDoc code: 9.2** (October 2020)

## Core EpiDoc Components

- [EpiDoc Guidelines](#): recommendations for markup of transcription, descriptive features, etc. ([About](#))
- [EpiDoc Schema](#): the TEI-derived schema against which EpiDoc XML should be validated
- [EpiDoc Reference Stylesheets](#): for transforming EpiDoc XML to HTML, text or ODF
- [EFES](#): a low-barrier EpiDoc publication platform

- EpiDoc recommended use of TEI
  - SGML/XML for literary/linguistic corpora since 1988
- Based on Leiden distinctions (1931)
  - Krummrey-Panciera 1980 / Panciera 1991
- EAGLE fields
  - EDR / EDH / PETRAE etc.
- Expanded for neighbouring disciplines
  - Papyrology
  - Other ancient inscribed objects (seals, coins, stamps...)
  - Other scripts (Cuneiform, Mayan, Mycenaean...)

- Guidelines
- Reference Stylesheets
- Schema
- EFES
- EpiDoc training programme
- Third party tools
  - Papyrological Navigator/editor
  - Perseids
  - EAGLE vocabularies and tools

Teaching EpiDoc	Teaching epigraphy
Assume epigraphic/classical knowledge	Assume Greek and Latin
Introduce technology	Introduce epigraphic practice
Give reference materials (Guidelines) and customized summary of reference (cheatsheet)	Give reference materials (handbooks) and customized summary of reference (Leiden conventions)
Give lots of exercises and practice	Give lots of exercises and practice

...	Illegible letters, not restored by editor.
<b>ab</b>	Letters ambiguous without their context.

# Tags and elements

- Made up of plain Unicode text, Latin or any other script
- Can be written and viewed in any text editor

**<tag>**content**</tag>**

element

**<empty></empty> = <empty/>**

empty element

# Attributes

`<tag attribute="value">...</tag>` attribute

E.g. `<coord type="latitude">-7.175</coord>`  
`<gap reason="lost"/>`

No markup inside attribute values!

✗ `<name key="<i>theodotus</i>">Θεόδωτος</name>` ✗

# Whitespace

- XML cares about the **presence or absence of whitespace**:

- Inside elements:

`<p type="new">`  $\neq$  `<p×type="new">`

- Inside the content:

`<w>Imperator</w>`  $\neq$  `<w>Imp erator</w>`

- Between elements:

`w>iura</w> <w>sua</w>`  $\neq$  `<w>iura</w><w>sua</w>`

# Whitespace

- XML **does not** care about the amount of type of whitespace
  - `<p type="new">` = `<p type="new">` = `<p type="new">`
  - **Imp erator** = **Imp erator**
  - NB!** **Imperator** **≠** **Imp erator**

# Special characters to be escaped with &entities;

- Literal angle brackets < >:
  - < - **&lt;**
  - > - **&gt;**
- Ampersand &:
  - & - **&amp;**
- Some characters that can't be entered using ordinary Unicode:
  - ■ - **&#x00A0;**

# Nesting

- The entire XML document must be contained within a single “root” element
- The structure of an XML document is tree-like, where elements may be nested in other elements

```
<TEI>
  <ancestor>
    <parent>
      <child></child>
      <sibling></sibling>
    </parent>
  </ancestor>
</TEI>
```

# Nesting

- **NB! Elements must be wholly contained by all ancestors and may not overlap!**

```
<TEI>
  <ancestor>
    <parent>
      <child></child>
      <sibling>
    </parent>
    </sibling>
  </ancestor>
</TEI>
```

A red 'X' mark is placed to the right of the closing tag for the <sibling> element, indicating that this structure is invalid because the <sibling> element is not wholly contained by the <parent> element.

```
<TEI>
  <ancestor>
    <parent>
      <child>
      <sibling>
    </child>
    </sibling>
  </parent>
  </ancestor>
</TEI>
```

A red 'X' mark is placed to the right of the closing tag for the <child> element, indicating that this structure is invalid because the <child> element is not wholly contained by the <parent> element.

# Avoiding nesting issues:

<book>

<page>

<paragraph> ... <paragraph>

<paragraph>These events suggest that there were influential groups of both pagans and Christians at Aphrodisias, and that there was some tension

</page>

<page>

between them; this may be the cause of the strife referred to in no. 64.

</paragraph>

</page>

</book>

# Avoiding nesting issues - Option 1:

<book>

<page>

<paragraph> ... <paragraph>

<paragraph> These events suggest that there were influential groups of both pagans and Christians at Aphrodisias, and that there was some tension

</paragraph>

</page>

<page>

<paragraph>

between them; this may be the cause of the strife referred to in no. 64.

</paragraph>

</page>

</book>

## Avoiding nesting issues - Option 2:

<book>

<pageBegin/>

<paragraph> ... <paragraph>

<paragraph>These events suggest that there were influential groups of both pagans and Christians at Aphrodisias, and that there was some tension

<pageBegin/>

between them; this may be the cause of the strife referred to in no. 64.

</paragraph>

</page>

</book>

# The 5 rules of well-formed XML

1. Whole document must be contained by one root element
2. All elements must be wholly contained by all ancestors
3. All open (non-empty) tags must close
4. There must be no missing < > / “ in tags and around attribute values
5. Any <, >, & characters must be “escaped”

# Validation to a schema

- A schema defines what elements and content can or must appear in any given context
- Guide rail for writing XML documents that allows you to check - “validate” your file in an XML editor
- It provides a **contextual menu** of elements, attributes, and (sometimes) attribute values that are available to you at any point in the document
- Well-formed **≠** valid
